# Three Zones, Three Set

## A Tradition of Comfort

Bryant has passed the century mark with a reputation of doing whatever it takes to make homes like yours more comfortable. And if there's one thing North Americans want, it's comfort. That's why Zone Perfect™ Three-Zone should be a core component of your Bryant home comfort system.

The Bryant Zone Perfect Three-Zone system can enhance your home's comfort and provide money savings by directing heating and cooling to areas of the home that need it most. Best of all, you can be confident that your system is not only designed, built, and backed by Bryant, it's installed by your trusted and professional Bryant dealer.

## Every Home is Unique

No matter how well designed or built, every home has areas that are difficult to heat or cool. The number of levels, number and size of windows, ceiling height, full sun or full shade, and many other factors can affect your indoor comfort. Most standard heating and cooling systems aren't equipped to handle

these variables, so you compensate by over-heating or over-cooling some areas to make others comfortable. That's an inefficient way to keep your home comfortable. And that's why Bryant offers the Zone Perfect Three-Zone system.

## Be Comfortable, Save Money

Zone Perfect Three-Zone from Bryant compensates for the temperature variations in your home. It can divide your indoor environment into three distinct areas, each with its own thermostat. These individual thermostats monitor indoor temperatures and send information to a central controller which decides how to best distribute heated or

cooled air to the separate zones. It's like having a separate system for each area.

For even greater energy savings and personalized comfort control, a Bryant programmable thermostat in each zone allows you to create up to four separate comfort settings per zone, per day.

# tings, One Comfortable Home.

## Warranty

To the original owner, the Bryant Zone Perfect™ Three-Zone is covered by a 10-year parts limited warranty.\* Ask your Bryant dealer about optional extended warranties, which may include labor.

\*Warranty period is 5-years if not registered within 90 days. Jurisdictions where warranty restrictions are not allowed will automatically receive a 10-year warranty. See warranty certificate at [bryant.com](http://bryant.com) for complete details.

## Performance

## Three Zones of Comfort

### Zone 1

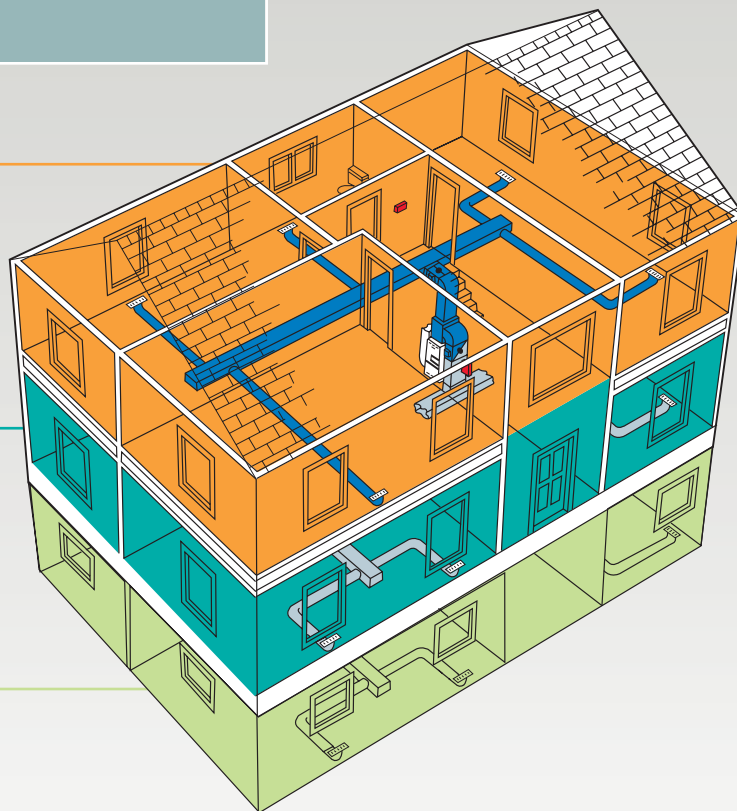

*The upper level of a multi-story home often creates comfort issues such as too cold in the winter and too hot in the summer. By creating one zone for the entire second floor, you can keep the upstairs comfortable without overdoing it downstairs.*

### Zone 2

*With much of a home's common area located on the main floor, this area is a likely choice for an entire zone. The usage patterns on the main floor usually dictate more comfort during more times of the day than a second story or basement.*

### Zone 3

*A basement or lower level will often make a good option for a third zone. Whether it's an unfinished space that needs less comfort, or if it's a finished space that needs more, basements typically receive less sunlight and are better insulated, which can mean less need for heating or cooling.*

## Zone Perfect™ Three-Zone Control

Bryant's Zone Perfect™ Three-Zone control analyzes information from up to three thermostats, and then adjusts system operation to economically meet the comfort demands of each zone.

For accurate, responsive comfort control, Bryant offers several standard and programmable thermostats, each designed to complement your Zone Perfect™ Three-Zone system. Ask your Bryant dealer for details on which thermostats will work in your home.
